*Water – 4 to 5 times a day at 15 minute intervals or enough to insure that the turfgrass and soil beneath are kept thoroughly moist. Do not flood it or let it set in water. Do this for the first 10 days or until your new grass is firmly established. After the first 10 days, cut watering back to three or four times a week, depending on weather. **If you see a blue gray silver haze on your new lawn, it is an indication of not receiving enough water.**

TURFGRASS OFFERS

A beautiful lawn is immediately pleasing to the eye & relaxing in its appearance. It also serves you well and improves your environment.

- **Drought Resistant** – Does well in hot dry climate – ADAPTABLE WHERE SEED IS NOT – Dense coverage.
- **Instant Cover** – No waiting! Year round installation keeps soil from blowing away.
- **Increase Home Value** – Works like an investment.
- **Creates a Healthy Atmosphere** – Hybrid Bermuda is virtually non-allergenic, 30% cooler than concrete or rock, reduces glare, filter odor and noise

GARDNER TURFGRASS GUARANTEE

- Any turfgrass problems must be submitted in writing to Gardner Turfgrass within 24 hours of turfgrass delivery. (We are not responsible for turf that has not been properly maintained. Example: turfgrass left on the pallet too long or not watered properly.) Turfgrass cost shall in no event exceed the wholesale price of the original failed turf. Labor and transportation costs shall be paid by the purchaser.
- Gardner Turfgrass is not responsible for soil preparations; poor soil; low moisture levels; future weed development; improper maintenance or neglect; turf not installed immediately upon delivery; and planting in shade.
- Most failures occur from turf remaining on the pallets to long and lack of watering during the first few weeks following installation. Some weed seed may be present in the soil on the job site and germinate after the turf is installed.
